O'REILLY®

Implementing an Azure Data Solution

Crash Course

Microsoft Certified: Azure Data Engineer

Associate

Reza Salehi

Cloud Consultant and Trainer

2008 - 2018

Course Overview

DP-200 Candidate Profile

- Microsoft Azure data engineers who
 - Collaborate with business stakeholders to identify and meet the data requirements
 - To implement data solutions that use Azure data services.

Azure Data Engineers

- Responsible for data-related implementation tasks
 - Include provisioning data storage services
 - Ingesting streaming and batch data, transforming data.
 - Implementing security requirements
 - Implementing data retention policies
 - Identifying performance bottlenecks, and
 - Accessing external data sources.

DP-200 Candidates

- Must be able to implement data solutions that use
 - Azure Cosmos DB, Azure SQL Database, Azure Synapse
 Analytics (formerly Azure SQL DW)
 - Azure Data Lake Storage
 - Azure Data Factory, Azure Stream Analytics, Azure Databricks, and Azure Blob storage.

DP-200 Skills Measured

Skills measured:

- Implement data storage solutions (40-45%)
- Manage and develop data processing (25-30%)
- Monitor and optimize data solutions (30-35%)

DP-200 Skills Measured

Exam DP-200: Implementing an Azure Data Solution skills

Implement Data Storage Solutions

Implement Data Storage Solutions

- Implement non-relational data stores
- Implement relational data stores
- Manage data security

Implement Non-relational Data Stores

- Implement a solution that uses <u>Cosmos DB</u>, <u>Data Lake Storage Gen2</u>, or <u>Blob storage</u>
- Implement data distribution and partitions
- Implement a consistency model in Cosmos DB
- Provision a non-relational data store
- Provide access to data to meet security requirements
- Implement for high availability, disaster recovery, and global distribution

Plan for Secure Endpoints

- Secure endpoints:
 - Azure Cosmos DB
 - Azure Storage Account
 - Azure Synapse Analytics
 - Azure Data Factory
 - Azure Databricks

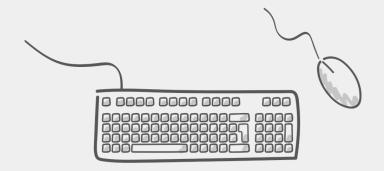

Cosmos DB Consistency Levels

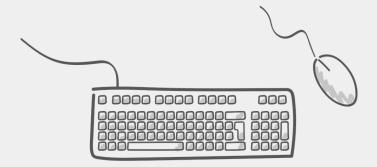

- Azure Cosmos DB
 - Provisioning
 - Data explorer
 - Throughput
 - Security
 - Disaster recovery
 - Consistency levels

- Provisioning
- Data explorer
- Security
- Tiers

Azure Data Lake Gen 2

Implement relational data stores

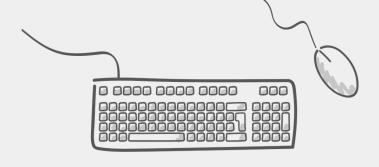

- Provide access to data to meet security requirements
- Implement for high availability and disaster recovery
- Implement data distribution and partitions for Azure Synapse Analytics
- Implement PolyBase

Plan for Secure Endpoints

- Azure Synapse access:
 - Firewall
 - Azure Active Directory
 - SQL authentication

- Azure Synapse Analytics
 - Provisioning and access
 - Querying/Analytics

Manage Data Security

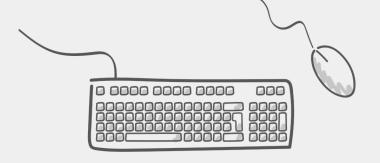

- Implement <u>data masking</u>
- Encrypt <u>data at rest</u> and in motion

Plan for Secure Endpoints

- Azure Synapse security options
 - Dynamic data masking
 - Row level security
 - Transparent Data Encryption
 - Always Encrypted

- Azure Synapse Analytics
 - Securing data

Manage and Develop Data Processing

Manage and Develop Data Processing

- Develop batch processing solutions
- Develop streaming solutions

Develop Batch Processing Solutions

- Develop batch processing solutions by using <u>Data Factory</u> and <u>Azure</u> <u>Databricks</u>
- Ingest data by using PolyBase
- Implement the integration runtime for <u>Data Factory</u>
- Create <u>linked services</u> and <u>datasets</u>
- Create pipelines and activities
- Create and schedule triggers
- Implement Azure Databricks clusters, notebooks, jobs, and autoscaling
- Ingest data into Azure Databricks

Azure Data Factory

Code-Free ETL as a Service

INGEST

- Multi-cloud and onprem hybrid copy data
- 90+ native connectors
- Serverless and autoscale
- Use wizard for quick copy jobs

CONTROL FLOW

- Design code-free data pipelines
- Generate pipelines via SDK
- Utilize workflow constructs: loops, branches, conditional execution, variables, parameters, ...

DATA FLOW

- Code-free data transformations that execute in Spark
- Scale-out with Azure Integration Runtimes
- Generate data flows via SDK
- Designers for data engineers and data analysts

SCHEDULE

- Build and maintain operational schedules for your data pipelines
- Wall clock, eventbased, tumbling windows, chained

MONITOR

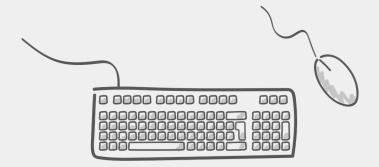

- View active executions and pipeline history
- Detail activity and data flow executions
- Establish alerts and notifications

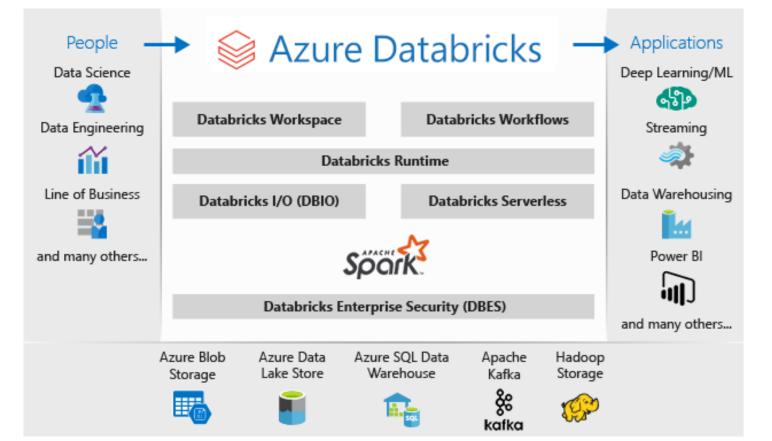

- Pipelines
- Linked services
- Datasets
- Schedules
- Run history

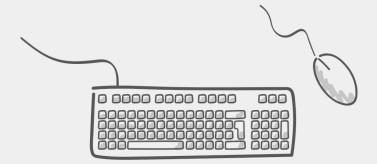

Azure Databricks

- Clusters
- Notebooks
- Jobs

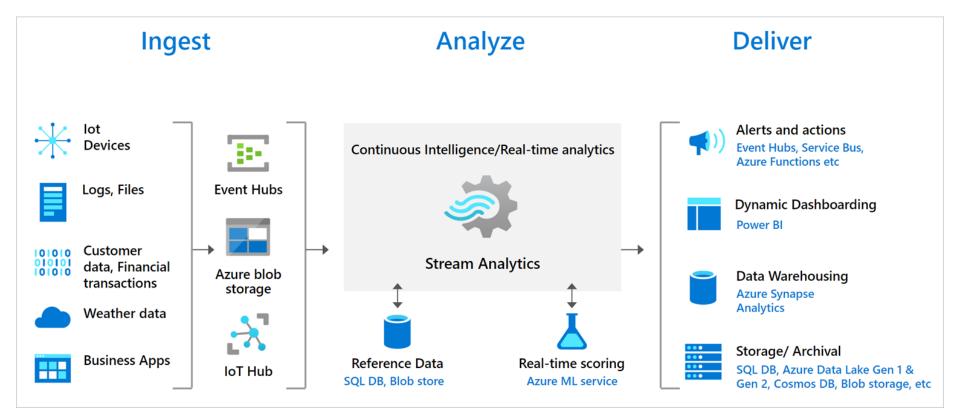

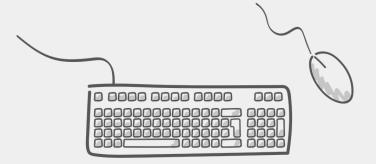

Develop Streaming Solutions

- Configure input and output
- Select the appropriate <u>built-in functions</u>
- Implement event processing by using Stream Analytics

Azure Stream Analytics

- Azure Stream Analytics
 - Inputs
 - Outputs
 - Functions
 - Windows
 - Jobs

Monitor and Optimize Data Solutions

Monitor and Optimize Data Solutions

- Monitor data storage
- Monitor data processing
- Optimize of Azure data solutions

Monitor data storage

- Monitor <u>relational</u> and <u>non-relational</u> data stores
- Implement <u>Blob storage monitoring</u>
- Implement Data Lake Storage Gen2 monitoring
- Implement <u>Azure Synapse Analytics monitoring</u>
- Implement <u>Cosmos DB monitoring</u>

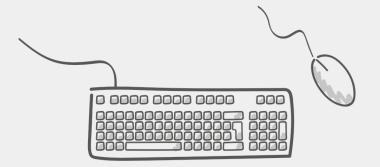

Monitor data processing

- Monitor Data Factory pipelines
- Monitor Azure Databricks
- Monitor Stream Analytics
- Configure Azure Monitor alerts
- Implement auditing by using Azure Log Analytics

Demo

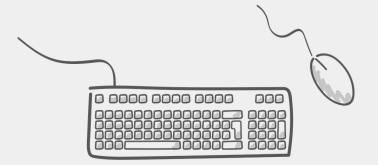

- Configure Monitoring
 - Azure Storage
 - Azure Data Lake Gen 2
 - Azure Cosmos DB
 - Azure Synapse Analytics
 - Azure Stream Analytics

Demo

- Configure Monitoring
 - Alerts

Optimize of Azure Data Solutions

- Troubleshoot data partitioning bottlenecks
- Optimize Data Lake Storage Gen2
- Optimize Stream Analytics
- Optimize Azure Synapse Analytics
- Manage the data lifecycle

The Exam

Questions in DP-200

- Multiple choice
- Drag and drop
- Scenario based
- No hands-on labs (as of December 10, 2020)

DP-200

- Exam DP-200 : https://docs.microsoft.com/en-us/learn/certifications/exams/dp-200
- Skills measured :

https://query.prod.cms.rt.microsoft.com/cms/api/am/binary/RE3Vzx2

docs.microsoft.com/en-us/learn/certifications/exams/dp-200

storage services, ingesting streaming and batch data, transforming data, implementing security requirements, implementing data retention policies, identifying performance bottlenecks, and accessing external data sources.

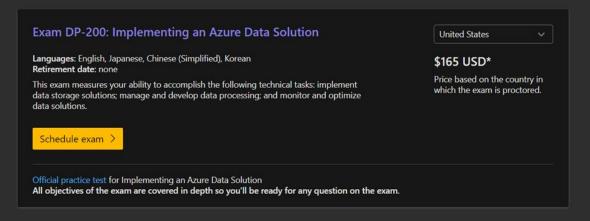

Candidates for this exam must be able to implement data solutions that use the following Azure services: Azure Cosmos DB, Azure SQL Database, Azure Synapse Analytics (formerly Azure SQL DW), Azure Data Lake Storage, Azure Data Factory, Azure Stream Analytics, Azure Databricks, and Azure Blob storage.
